TITLE: An Investigation of the Flow From Under a Water Gate Over a Weir Crest Having a Practical Profile (Issledovaniye istecheniya iz pod-shchita na grebne vodoslivaya prakticheskogo profilya)

PERIODICAL: Sb. nauch. stud. rabot. Mosk. in-t inzh. vod kh-va 1956 Nr 3 pp 22-27

ABSTRACT: The paper gives a brief description of the results of several experiments on the model of a curvilinear weir 24 cm high in a 25.8 cm wide trough. The experiments were conducted for the purpose of verifying the formula of the flow rate from under a water gate

$$Q = \phi \epsilon ab \sqrt{2gH_o}$$

The authors point out the obvious proposition that the pressure on the effective portion of the weir when the flow issues from under the water gate decreases as compared to that of a free overflow and state the fact that the values recommended by F. I. Pikalov [Agroskin, 11,

Dmitriyev, G. T., Pikalov, F. I. Gidravlika (Hydraulics), 1954] for the dimensions  $\mu = \phi^4$ , which proved to be 8 - 33% lower than the experimental ones, are under-rated. A graph of the dependence of the deviations from the relative ( $a/H$ ) values of the rise of the water gate is submitted in this connection. The paper also adduces the experimental dependence of  $\phi$  on the pressure at the crest,  $p/\gamma$ , and on the height of the water-gate rise  $a$ .

801. IMPROVED OBSTETRIC-GYNAECOLOGIC SERVICE TO THE RURAL  
POPULATION (Russian text) - Mashkilevson A. N. - ZDRAVOOKHR.

BELOR. 1956, 11 (8-10)  
The quality of obstetric service to women of the rural population of White Russia  
is improving from year to year. Stillbirths have declined by 38% in 1955, as  
compared with 1950, infant mortality by 36%, and maternal mortality by more  
than two thirds. In 1955, 86.9% of all infants born in rural hospitals were vaccin-  
ated against tb. In 1954 and 1955 deliveries without obstetrical assistance were  
exceptional. Obstetrical assistance in the home comprised 36.9% of all deliveries

Title : The Influence of Vitamin B<sub>1</sub> on the Course of  
the Inflammatory Process in the Skin.

Orig Pub: Tr. Voyen.-med. adak., 1957, 68, 160-164

Abstract: In 200 patients with various forms of eczema,  
a beneficial influence was rendered by intra-  
venous introduction of vitamin B<sub>1</sub> (15-20 mg  
each daily) without combination with any other  
form of treatment. Treatment with B<sub>1</sub> is parti-  
cularly effective in patients with a prevalence  
of tonus of the sympathetic nervous system.

Title : Influence of Shelterbelt Zones on the Development  
of Corn.

Orig Pub: Vestn. s.-kh. nauki, 1957, No 3, 49-55.

Abstract: A study was conducted by members of the Ukrainian Scientific-Research Institute of Forestry and Agro-Forest Improvement in 1955 on the influence of forest zones of dense and blow-off construction on the growth and development of corn. Forest belts, by decreasing the rate of the wind and increasing the air and the soil temperature on the surrounding area, assure a more intensive growth, rapid develop-

Title : Experiment in Creating Orchard Shelter Belts by  
Planting and Seeding in the Botanic Garden of the  
Voronezh State U.

Orig Pub: Byul. O-va yestestvoispyt. pri Voronezhsk. un-te,  
1955, 10, 27-33.

Abstract: A scheme is recommended for a 13-row orchard shel-  
ter belt, where the outside rows (1-4 and 13-10)  
are occupied by fruit-berry plants, the central  
rows by tree species. It was established that bet-  
ter survival, growth and beginning of fruit bearing  
in the fruit-berry plants are obtained by planting

Title : Michurin Teaching on the Viability and Its Significance  
for the Vegetative Propagation of Lignaceous Plants.

Orig Pub : Tr. Voronexhsk. un-ta, 1956, 36, 37-50

Abstract : For the experiments, 60 each of upper and lower green cuttings from each of the 13 species of trees of seed origin were taken. The lower cuttings were cut off from the root shoots, at mp growth, shoots from the lower part of the trunk and stool layers; the upper - from the upper tier of the trees. Half of the cuttings were treated with heteroauxine solution (100 milligrams to 1 liter) and planted in hotbed. In a number of species

Controller, D.D. (Sup. M.), Auditor, V.G.: Comptroller, L.S.:  
Treas., H.H.; Auditor, D.M.**

**PURPOSE:** This book is intended for petroleum specialists of geological research organizations, educational institutions, and petroleum refining plants.

**Statement:** This collection is the first of a multi-volume publication on the results of scientific research work carried out in the Soviet Union on the chemistry and technology of carbon- and nitrogen-containing compounds during the period 1950-1970 and according to a coordinated research project outlined in 1950 by the sponsoring agency (Soviet Union, no 430).

**Authors:** B.B. G.S. Bhandarkar, L.E. Chaffee, V.G. Balakrishnan, and  
S.V. Venkateswaran. **Keywords:** Chemical Composition of the Egg.

Thirty different sulfur-organic compounds were synthesized to facilitate the investigation of the negative effects of these compounds in the detection and reduction of proteins and to seek out additional agents for protein denaturation. Optimum reaction times and yields of denaturation of the synthesized compounds are shown.
